

Copilot

100 questions · compiled from 3 files

COPILOT FUNDAMENTALS

1. Which factor most improves the usefulness of a copilot response?

1. Providing relevant context and clear constraints
2. Using only one-word prompts
3. Avoiding all examples
4. Never revising the request

Answer 1 · Providing relevant context and clear constraints

COPILOT FUNDAMENTALS

2. What is the best role for a copilot in a professional workflow?

1. A tool for accelerating drafting and ideation under human supervision
2. A system that removes the need for expertise
3. A replacement for all approvals
4. A guaranteed source of truth

Answer 1 · A tool for accelerating drafting and ideation under human supervision

COPILOT FUNDAMENTALS

3. Why should users be cautious about factual claims generated by copilots?

1. Because fluent wording can hide unsupported or incorrect statements
2. Because copilots never answer factual questions
3. Because all generated text is copied from one source
4. Because factual tasks are impossible for AI

Answer 1 · Because fluent wording can hide unsupported or incorrect statements

COPILOT FUNDAMENTALS

4. Which prompt is most likely to produce a structured answer?

1. List three risks of this plan and give one mitigation for each in a table
2. Help me
3. Thoughts?
4. Do something useful

Answer 1 · List three risks of this plan and give one mitigation for each in a table

COPILOT FUNDAMENTALS

5. What is a practical benefit of iterative refinement with a copilot?

1. It helps improve accuracy relevance and format over multiple turns
2. It guarantees perfect output on the first try
3. It removes the need for domain knowledge
4. It prevents all ambiguity automatically

Answer 1 · It helps improve accuracy relevance and format over multiple turns

6. What is the main reason to define constraints such as length audience and tone in a prompt?

1. They guide the model toward output that better fits the intended use
2. They make the model run offline
3. They eliminate the need for source material
4. They force the model to be correct

Answer 1 · They guide the model toward output that better fits the intended use

7. Which action best reflects responsible AI use?

1. Checking generated output before sharing or deploying it
2. Trusting any confident answer
3. Skipping review to save time
4. Using AI only when no context is available

Answer 1 · Checking generated output before sharing or deploying it

8. What does a copilot usually do best?

1. Generate a useful first draft or suggestion for refinement
2. Make final legal decisions
3. Guarantee compliance approval
4. Replace all subject-matter experts

Answer 1 · Generate a useful first draft or suggestion for refinement

9. Why can the same prompt produce different quality across tasks?

1. Output quality depends on task clarity context and complexity
2. Because copilots only work for coding
3. Because all prompts are interpreted identically
4. Because quality depends only on screen size

Answer 1 · Output quality depends on task clarity context and complexity

10. What is the value of asking a copilot for alternatives?

1. It can provide multiple approaches that the user can compare and evaluate
2. It guarantees one option is perfect
3. It removes the need for judgment
4. It prevents any bias in the output

Answer 1 · It can provide multiple approaches that the user can compare and evaluate

11. How can GitHub Copilot help when starting a new Python module?

1. By suggesting imports scaffolding and function stubs
2. By deploying the application automatically
3. By replacing version control
4. By preventing all syntax errors

Answer 1 · By suggesting imports scaffolding and function stubs

12. What kind of prompt often works well with Copilot in code editors?

1. A descriptive comment explaining the intended function behavior
2. A random sentence unrelated to the file
3. A blank line only
4. A request with no coding context

Answer 1 · A descriptive comment explaining the intended function behavior

13. Why is it important to inspect edge cases in Copilot-generated Python code?

1. The code may handle common cases but fail on unusual inputs
2. Because edge cases are automatically solved by AI
3. Because Python ignores invalid inputs
4. Because testing edge cases is only for production systems

Answer 1 · The code may handle common cases but fail on unusual inputs

14. Which is a good use of Copilot during refactoring?

1. Suggesting cleaner structure while the developer verifies behavior
2. Changing all logic without review
3. Deleting tests to simplify code
4. Replacing documentation with generated comments only

Answer 1 · Suggesting cleaner structure while the developer verifies behavior

15. How can unit tests complement Copilot use?

1. They help verify whether generated code behaves as intended
2. They make prompts unnecessary
3. They guarantee code style compliance only
4. They prevent the need for debugging

Answer 1 · They help verify whether generated code behaves as intended

16. What is a common issue with generated code that appears polished?

1. It may still contain subtle logic bugs or poor assumptions
2. It cannot include loops
3. It always fails to import libraries
4. It never matches surrounding style

Answer 1 · It may still contain subtle logic bugs or poor assumptions

17. Why might a developer provide example input and output in a comment?

1. To help Copilot infer the expected behavior more accurately
2. To disable suggestions temporarily
3. To reduce file size
4. To hide implementation details from the model

Answer 1 · To help Copilot infer the expected behavior more accurately

18. What is the best response if Copilot suggests deprecated library usage?

1. Replace it with current recommended practice after verification
2. Keep it because it was suggested
3. Ignore warnings permanently
4. Remove the library from the project

Answer 1 · Replace it with current recommended practice after verification

19. Why should developers compare Copilot suggestions against project conventions?

1. Generated code may not automatically follow local standards or architecture
2. Because conventions only matter in Java
3. Because AI suggestions are always identical across projects
4. Because project conventions reduce performance

Answer 1 · Generated code may not automatically follow local standards or architecture

20. Which scenario shows effective learning with Copilot?

1. Using suggestions to explore patterns and then understanding why they work
2. Memorizing outputs without reading them
3. Accepting code without testing
4. Using it only to avoid writing comments

Answer 1 · Using suggestions to explore patterns and then understanding why they work

21. How can Copilot assist with documentation in Python projects?

1. By drafting docstrings and explanations that the developer reviews
2. By replacing all code comments permanently
3. By generating runtime logs automatically
4. By enforcing package installation

Answer 1 · By drafting docstrings and explanations that the developer reviews

22. What is a risk of asking Copilot for large multi-file changes in one step?

1. The suggestions may become less precise and harder to validate
2. Because Copilot cannot read any file
3. Because Python forbids multi-file projects
4. Because large tasks always improve accuracy

Answer 1 · The suggestions may become less precise and harder to validate

23. Why is naming important when using Copilot?

1. Clear names provide semantic clues that improve suggestions
2. Names only affect syntax highlighting
3. Variable names are ignored by the model
4. Naming matters only after deployment

Answer 1 · Clear names provide semantic clues that improve suggestions

24. What is a sensible use of Copilot for data-related Python code?

1. Generating starter code for parsing cleaning or transformation that you verify
2. Approving data quality automatically
3. Replacing all exploratory analysis
4. Guaranteeing efficient memory usage

Answer 1 · Generating starter code for parsing cleaning or transformation that you verify

25. Why should performance still be reviewed in Copilot-generated Python code?

1. A correct-looking solution may be inefficient for real workloads
2. Because generated code cannot use loops
3. Because performance only matters in compiled languages
4. Because AI always optimizes for speed first

Answer 1 · A correct-looking solution may be inefficient for real workloads

26. How can Microsoft 365 Copilot help with long documents?

1. By summarizing key points and helping draft revisions
2. By converting them into databases automatically
3. By approving them for publication
4. By removing the need to read them at all

Answer 1 · By summarizing key points and helping draft revisions

27. What is a useful way to prompt Copilot in workplace writing?

1. Specify the audience purpose tone and desired length
2. Ask for something better with no details
3. Use only emojis
4. Provide no source text

Answer 1 · Specify the audience purpose tone and desired length

28. Why should users verify action items extracted from meetings?

1. Important commitments or owners may be incomplete or misinterpreted
2. Because action items are always fabricated
3. Because meetings cannot be summarized
4. Because AI tools cannot process spoken language

Answer 1 · Important commitments or owners may be incomplete or misinterpreted

29. Which task is appropriate for Copilot in a word processor?

1. Rewriting a paragraph for clarity and conciseness
2. Signing contracts autonomously
3. Approving policy changes
4. Replacing legal review

Answer 1 · Rewriting a paragraph for clarity and conciseness

30. How can Copilot support presentation creation?

1. By helping outline slides and summarize source material
2. By guaranteeing audience engagement
3. By replacing the presenter
4. By removing the need for evidence

Answer 1 · By helping outline slides and summarize source material

31. Why is source context important when asking for a summary?

1. Without context the summary may miss priorities or distort emphasis
2. Because summaries only work on spreadsheets
3. Because source context slows the model too much
4. Because context is irrelevant to summarization

Answer 1 · Without context the summary may miss priorities or distort emphasis

32. What is a strong use case for Copilot in email?

1. Drafting a response based on an existing thread and desired tone
2. Automatically sending confidential data
3. Approving all incoming requests
4. Deleting messages without review

Answer 1 · Drafting a response based on an existing thread and desired tone

33. Why might a user ask Copilot to create bullet points from a report?

1. To make the information easier to scan and communicate
2. To change the report's conclusions
3. To avoid checking the report
4. To encrypt the document

Answer 1 · To make the information easier to scan and communicate

34. What is a key reason to review AI-generated workplace content for bias or tone?

1. The wording may be inappropriate for the audience or situation
2. Because tone never matters in business
3. Because AI always writes neutrally
4. Because bias only appears in code

Answer 1 · The wording may be inappropriate for the audience or situation

35. Which prompt is most likely to help create a useful executive summary?

1. Summarize this proposal in six bullet points focusing on cost timeline and risks
2. Summarize this somehow
3. Make it shorter
4. Thoughts

Answer 1 · Summarize this proposal in six bullet points focusing on cost timeline and risks

36. What is the main benefit of using Copilot for first drafts?

1. It reduces blank-page effort and speeds up iteration
2. It guarantees final approval
3. It removes the need for editing
4. It ensures perfect factual accuracy

Answer 1 · It reduces blank-page effort and speeds up iteration

37. Why should users avoid pasting unnecessary sensitive data into prompts?

1. Data minimization supports privacy and responsible use practices
2. Because sensitive data improves formatting
3. Because AI cannot process private text
4. Because only public data can be summarized

Answer 1 · Data minimization supports privacy and responsible use practices

38. How can Copilot help in spreadsheet analysis at a basic level?

1. By helping explain patterns formulas or summaries in plain language
2. By guaranteeing statistically valid conclusions
3. By replacing all chart review
4. By preventing missing values

Answer 1 · By helping explain patterns formulas or summaries in plain language

39. What does a good review step look like after Copilot drafts content?

1. Checking facts tone completeness and alignment with the goal
2. Publishing immediately
3. Only correcting spelling
4. Assuming the structure is enough

Answer 1 · Checking facts tone completeness and alignment with the goal

40. Why is audience adaptation valuable in AI-assisted writing?

1. Different readers need different levels of detail language and emphasis
2. Because audience never affects communication
3. Because AI cannot change style
4. Because adaptation only matters in marketing

Answer 1 · Different readers need different levels of detail language and emphasis

41. What is the best way to think about AI-generated output?

1. As a draft or suggestion that still needs evaluation
2. As guaranteed truth
3. As a final deliverable every time
4. As a substitute for accountability

Answer 1 · As a draft or suggestion that still needs evaluation

42. Which habit most improves results across copilot tools?

1. Being specific about the task and expected output
2. Using the same vague prompt for everything
3. Avoiding context
4. Skipping follow-up questions

Answer 1 · Being specific about the task and expected output

43. Why is verification especially important for domain-specific tasks?

1. Specialized work often requires accuracy standards the model may not reliably meet
2. Because domain tasks are easier than general tasks
3. Because verification only matters for beginners
4. Because AI tools refuse domain language

Answer 1 · Specialized work often requires accuracy standards the model may not reliably meet

44. What does prompt refinement usually involve?

1. Adding clarifying details constraints or examples after reviewing the first output
2. Repeating the same request without changes
3. Deleting all context
4. Switching tools after every response

Answer 1 · Adding clarifying details constraints or examples after reviewing the first output

45. Why can examples in a prompt be helpful?

1. They show the model the pattern or style you want
2. They make the model ignore instructions
3. They only help with image generation
4. They remove the need for review

Answer 1 · They show the model the pattern or style you want

46. What is a common sign that a task should be broken into smaller prompts?

1. The output is broad inconsistent or misses important constraints
2. Because short tasks are impossible for AI
3. Because decomposition reduces all creativity
4. Because copilots only answer one sentence at a time

Answer 1 · The output is broad inconsistent or misses important constraints

47. Which practice helps maintain quality when using copilots repeatedly?

1. Comparing outputs against requirements and revising as needed
2. Accepting the first answer to save time
3. Never documenting prompt patterns
4. Using no constraints

Answer 1 · Comparing outputs against requirements and revising as needed

48. Why is it useful to specify the desired format such as table bullets or steps?

1. It makes the response easier to use in the intended workflow
2. It guarantees correctness
3. It prevents hallucinations completely
4. It only affects visual appearance

Answer 1 · It makes the response easier to use in the intended workflow

49. What is the main benefit of combining AI assistance with human expertise?

1. The AI speeds up generation while the human provides judgment and validation
2. The human becomes unnecessary
3. The AI guarantees compliance
4. The workflow no longer needs iteration

Answer 1 · The AI speeds up generation while the human provides judgment and validation

50. What should a user do if a copilot response is partially useful but incomplete?

1. Refine the prompt and ask for the missing pieces
2. Discard the tool permanently
3. Assume the missing parts are unimportant
4. Publish the incomplete result

Answer 1 · Refine the prompt and ask for the missing pieces

51. What is the primary purpose of an AI copilot in software and productivity workflows?

1. To assist users by generating suggestions and accelerating tasks
2. To replace all human decision-making
3. To permanently store all private data
4. To prevent users from editing outputs

Answer 1 · To assist users by generating suggestions and accelerating tasks

52. Which description best fits GitHub Copilot?

1. An AI assistant that suggests code and coding-related help
2. A database engine for analytics
3. A spreadsheet formatting tool only
4. A cloud storage service

Answer 1 · An AI assistant that suggests code and coding-related help

53. Which description best fits Microsoft 365 Copilot?

1. An AI assistant integrated into productivity apps for drafting summarizing and organizing work
2. A replacement for the operating system
3. A version control platform
4. A Python-only coding extension

Answer 1 · An AI assistant integrated into productivity apps for drafting summarizing and organizing work

54. Why is human review still necessary when using AI copilots?

1. Because generated outputs may contain errors omissions or unsuitable assumptions
2. Because copilots cannot generate any useful output
3. Because review is only needed for legal documents
4. Because AI outputs are always intentionally misleading

Answer 1 · Because generated outputs may contain errors omissions or unsuitable assumptions

55. What is meant by prompt quality when working with a copilot?

1. How clearly and specifically the user describes the task and context
2. How colorful the interface looks
3. How fast the internet connection is
4. How many windows are open

Answer 1 · How clearly and specifically the user describes the task and context

56. Which of the following usually improves copilot output quality?

1. Providing clear context constraints and desired format
2. Using the shortest possible vague request
3. Never revising the prompt
4. Removing all task details

Answer 1 · Providing clear context constraints and desired format

57. What is a key limitation of AI copilots?

1. They can produce plausible but incorrect responses
2. They always refuse ambiguous tasks
3. They only work offline
4. They can verify all facts automatically

Answer 1 · They can produce plausible but incorrect responses

58. Which workflow best reflects effective copilot use?

1. Prompt generate review refine
2. Generate once and trust forever
3. Avoid checking outputs
4. Use it only for file naming

Answer 1 · Prompt generate review refine

59. Why should sensitive information be handled carefully when using AI assistants?

1. Because privacy and data governance requirements may apply
2. Because copilots cannot read text
3. Because sensitive data improves hallucination
4. Because privacy matters only in finance

Answer 1 · Because privacy and data governance requirements may apply

60. What does iterative prompting mean?

1. Improving results through repeated refinement of prompts and outputs
2. Running the same vague prompt forever
3. Using only one-word instructions
4. Disabling all suggestions after the first try

Answer 1 · Improving results through repeated refinement of prompts and outputs

61. Which task is a good use case for a copilot?

1. Drafting a first version of content or code
2. Making irreversible business decisions alone
3. Approving compliance policies automatically
4. Replacing all testing

Answer 1 · Drafting a first version of content or code

62. Why is grounding important when using a copilot for factual work?

1. It ties the output to relevant context or source material and reduces unsupported claims
2. It makes the response shorter only
3. It guarantees perfect truth in all cases
4. It removes the need for prompts

Answer 1 · It ties the output to relevant context or source material and reduces unsupported claims

63. What is the best interpretation of AI assistance in professional work?

1. A productivity aid that still requires judgment
2. A complete substitute for expertise
3. A tool that eliminates accountability
4. A system that should never be questioned

Answer 1 · A productivity aid that still requires judgment

64. Which prompt is likely to produce the best result?

1. Write a professional email to a client summarizing the delay in 120 words with a polite tone
2. Write something
3. Help
4. Do task fast

Answer 1 · Write a professional email to a client summarizing the delay in 120 words with a polite tone

65. Why can ambiguous prompts lead to weak outputs?

1. Because the model has insufficient direction about intent scope or constraints
2. Because ambiguity improves precision
3. Because the copilot ignores all unclear prompts
4. Because ambiguity only affects image tools

Answer 1 · Because the model has insufficient direction about intent scope or constraints

66. What is a common use of GitHub Copilot in Python development?

1. Suggesting code completions and function implementations
2. Compiling Python into hardware circuits
3. Replacing the Python interpreter
4. Managing payroll systems

Answer 1 · Suggesting code completions and function implementations

67. How can comments help GitHub Copilot generate better code?

1. They provide intent and context for the desired implementation
2. They disable autocomplete
3. They encrypt the source file
4. They reduce indentation errors automatically

Answer 1 · They provide intent and context for the desired implementation

68. Why should a developer test Copilot-generated Python code before using it?

1. Because the suggestion may be syntactically valid but logically incorrect
2. Because generated code cannot run in Python
3. Because testing is only needed for web apps
4. Because Copilot always writes production-ready code

Answer 1 · Because the suggestion may be syntactically valid but logically incorrect

69. Which of the following is a useful way to guide Copilot?

1. Writing descriptive function names and docstrings
2. Deleting all variable names
3. Using random comments unrelated to the task
4. Avoiding any structure in the file

Answer 1 · Writing descriptive function names and docstrings

70. What is the benefit of asking Copilot for boilerplate code?

1. It can speed up repetitive setup tasks
2. It guarantees optimal architecture
3. It removes the need for imports
4. It prevents runtime errors

Answer 1 · It can speed up repetitive setup tasks

71. What is a risk of overrelying on Copilot for unfamiliar Python libraries?

1. A developer may accept code they do not understand
2. Because Copilot blocks documentation access
3. Because libraries stop working with AI
4. Because Python forbids generated code

Answer 1 · A developer may accept code they do not understand

72. Which task is GitHub Copilot especially helpful for?

1. Generating repetitive code patterns
2. Replacing all debugging tools
3. Approving pull requests automatically
4. Managing cloud billing

Answer 1 · Generating repetitive code patterns

73. If Copilot suggests a loop when vectorized pandas code would be better what should the developer do?

1. Review and refactor the suggestion based on best practices
2. Accept it without reading
3. Delete the dataset
4. Disable Python warnings only

Answer 1 · Review and refactor the suggestion based on best practices

74. Why is context from nearby code important for Copilot suggestions?

1. Because the model uses surrounding code to infer patterns and intent
2. Because context only affects syntax coloring
3. Because nearby code is ignored
4. Because context matters only in notebooks

Answer 1 · Because the model uses surrounding code to infer patterns and intent

75. What is a good practice when using Copilot to write a function?

1. Provide the function purpose inputs and expected output
2. Hide the function name
3. Remove all comments and tests
4. Ask for unrelated code in the same prompt

Answer 1 · Provide the function purpose inputs and expected output

76. How can Copilot help with learning Python?

1. By offering examples that the learner can inspect and evaluate
2. By eliminating the need to understand syntax
3. By guaranteeing the best solution every time
4. By replacing all exercises

Answer 1 · By offering examples that the learner can inspect and evaluate

77. What is the best response if Copilot generates insecure or inefficient code?

1. Reject or revise it and apply secure efficient coding practices
2. Use it because AI generated it
3. Ignore the issue if the code runs once
4. Only change variable names

Answer 1 · Reject or revise it and apply secure efficient coding practices

78. Which scenario best demonstrates responsible Copilot use?

1. Using suggestions as drafts and validating them with tests
2. Submitting generated code without reading it
3. Skipping edge-case checks
4. Assuming all suggestions follow project standards

Answer 1 · Using suggestions as drafts and validating them with tests

79. Why might a developer ask Copilot to explain a code snippet?

1. To better understand logic and intent
2. To convert Python into SQL automatically
3. To bypass code review
4. To hide bugs from teammates

Answer 1 · To better understand logic and intent

80. What is a strong reason to keep prompts close to the code task at hand?

1. Focused context improves relevance and reduces off-target suggestions
2. Long unrelated prompts always improve accuracy
3. The model only reads the first word
4. Specificity makes no difference

Answer 1 · Focused context improves relevance and reduces off-target suggestions

81. What is a common use of Microsoft 365 Copilot in document work?

1. Drafting summarizing and rewriting content
2. Compiling Python packages
3. Managing GPU drivers
4. Creating database indexes

Answer 1 · Drafting summarizing and rewriting content

82. How can Copilot help in email workflows?

1. By drafting replies and summarizing threads
2. By physically sending packages
3. By replacing the inbox server
4. By deleting all unread messages automatically

Answer 1 · By drafting replies and summarizing threads

83. Why should users verify AI-generated summaries in workplace tools?

1. Important details nuance or context may be omitted or misstated
2. Because summaries are always random
3. Because workplace tools cannot display text
4. Because summaries are illegal in most organizations

Answer 1 · Important details nuance or context may be omitted or misstated

84. Which task is well suited for Copilot in presentations?

1. Creating a first draft of slide content
2. Replacing the need for audience analysis
3. Guaranteeing persuasive delivery
4. Eliminating the need for visuals

Answer 1 · Creating a first draft of slide content

85. What is a likely benefit of Copilot in meeting productivity?

1. It can help summarize action items and key discussion points
2. It prevents all scheduling conflicts
3. It records meetings without permission in every case
4. It replaces all participants

Answer 1 · It can help summarize action items and key discussion points

86. Why is tone specification useful when prompting Copilot for workplace writing?

1. Because tone affects appropriateness for audience and purpose
2. Because tone only changes font style
3. Because tone is irrelevant in professional communication
4. Because AI cannot adjust tone

Answer 1 · Because tone affects appropriateness for audience and purpose

87. Which prompt is better for Microsoft 365 Copilot?

1. Summarize this report for executives in five bullet points focusing on risks and next steps
2. Summarize
3. Do something with this
4. Make it better somehow

Answer 1 · Summarize this report for executives in five bullet points focusing on risks and next steps

88. How can Copilot support productivity without replacing judgment?

1. By accelerating drafting while the user reviews and finalizes outputs
2. By making all decisions automatically
3. By removing the need for collaboration
4. By preventing edits after generation

Answer 1 · By accelerating drafting while the user reviews and finalizes outputs

89. What is a major concern when using AI in enterprise productivity tools?

1. Ensuring outputs align with privacy security and organizational policy
2. Because AI cannot process language
3. Because formatting is always impossible
4. Because enterprise users never need review

Answer 1 · Ensuring outputs align with privacy security and organizational policy

90. Which of the following is a good use of Copilot in spreadsheets?

1. Helping summarize trends or explain formulas
2. Replacing all numerical validation
3. Guaranteeing correct forecasts
4. Preventing data entry errors permanently

Answer 1 · Helping summarize trends or explain formulas

91. Why might a user ask Copilot to rewrite text?

1. To improve clarity conciseness or tone
2. To change the underlying facts automatically
3. To avoid reading the text
4. To remove all structure

Answer 1 · To improve clarity conciseness or tone

92. What is the best reason to provide audience context in a prompt?

1. It helps tailor the output to the reader's needs and expectations
2. It reduces file size
3. It guarantees legal approval
4. It prevents all ambiguity forever

Answer 1 · It helps tailor the output to the reader's needs and expectations

93. What does a strong Copilot workflow in office tools usually include?

1. Draft review edit and verify
2. Draft and immediately publish
3. Never checking facts
4. Using one prompt for every task

Answer 1 · Draft review edit and verify

94. Which task is least appropriate to delegate fully to Copilot?

1. Final approval of high-stakes business communication
2. Creating a rough outline
3. Suggesting alternate wording
4. Summarizing a long draft

Answer 1 · Final approval of high-stakes business communication

95. Why can structured prompts improve output in productivity apps?

1. They clarify goal format audience and constraints
2. They make the AI ignore context
3. They only matter for coding tasks
4. They reduce the need for source material

Answer 1 · They clarify goal format audience and constraints

96. What does it mean to use a copilot as a collaborator rather than an autopilot?

1. The user stays actively involved in directing and reviewing the work
2. The AI works without any human input
3. The user never edits outputs
4. The system makes all final decisions

Answer 1 · The user stays actively involved in directing and reviewing the work

97. Which practice best reduces the chance of accepting a poor AI suggestion?

1. Reviewing the output against the task requirements
2. Assuming the first answer is best
3. Skipping validation to save time
4. Using the vaguest prompt possible

Answer 1 · Reviewing the output against the task requirements

98. Why is task decomposition helpful when prompting a copilot?

1. Breaking a complex task into smaller steps often improves control and quality
2. Because copilots cannot handle any multi-step work
3. Because smaller tasks remove the need for review
4. Because decomposition only matters in spreadsheets

Answer 1 · Breaking a complex task into smaller steps often improves control and quality

99. What is one sign that a copilot response should be questioned?

1. It sounds confident but lacks supporting detail or fit to the task
2. It uses complete sentences
3. It arrives quickly
4. It includes bullet points

Answer 1 · It sounds confident but lacks supporting detail or fit to the task

100. Why is specifying output format useful?

1. It helps the copilot structure the response in a usable way
2. It makes the answer always correct
3. It prevents all hallucinations
4. It only matters for image generation

Answer 1 · It helps the copilot structure the response in a usable way
